Java五子棋作业

代码主要分为两个 .java 文件, 一共有两个类 ChessBoard 和 Player, main 函数写在 Player.java 文件中, 可以直接从 main 开始看。

1代码

ChessBoard.java:

```
public class ChessBoard {
   /*
    * 这个棋盘是15路的,因为文本难以打印出交点上的棋子,
    * 所以将以横15纵15的方格形式输出
   public char[][] chessBoard=new char[15][15];
   public static int WHITE=1;
   public static int BLACK=0;
   public ChessBoard(){
       for(int i=0;i<15;i++)
           for(int j=0;j<15;j++)
               chessBoard[i][j]='.';
   }
   public void printBoard(){
       char[] a=
{'1','2','3','4','5','6','7','8','9','A','B','C','D','E','F'};
       System.out.print(" ");
       for(int i=0;i<15;i++)
           System.out.print(a[i]+" "); //输出列号
       System.out.print("\n");
       for(int i=0;i<15;i++){
           System.out.print(a[i]+" "); //输出行号
           for(int j=0; j<15; j++)
               System.out.print(chessBoard[i][j]+" ");
           System.out.print("\n");
       }
   }
```

```
public void putChess(int x, int y, int color){
       //0: black
       //1: white
       char chess=(color=WHITE)?'0':'X';
       chessBoard[x-1][y-1]=chess;
       if(appearWinner(x,y,chess))
          success(color);
   }
   public boolean occupied(int x,int y){
       return (chessBoard[x-1][y-1]\neq'.');
   }
   public boolean appearWinner(int x,int y,char chess){
       /*
        * para----
        * x,y: 当前棋子的坐标
        * color: 当前执子方的颜色,值可能是 'X'||'0'
        * return-----
        * 是否在任意一个方向上连成五子
       //只要这次落子引起了任何一个方向上的五子连珠的形成,就直接这一方
success
       return checkLR(x,y,chess)
              || checkUD(x,y,chess)
              || checkLURD(x,y,chess)
              || checkRULD(x,y,chess);
   }
   public boolean checkLR(int x,int y,char color){
       //连起来一共有多长,1是当前的落子
       int sum=1;
       //从当前棋子出发向左
       for(int i=1;i<5;i++){
          int xx=x-1 - i, yy=y-1;
           //直到这个位置的棋子和当前落子颜色不一样停止。
          if((xx<0)||(xx>14)||yy<0||yy>14)
              break;
          if (chessBoard[xx][yy] \neq color)
              break;
          sum++;
       }

            sum++;
        }
        return sum = 5;
    }
    public void success(int color){
        //某方成功之后输出成功的信息并且退出程序
        String tmp=(color=WHITE)?"WHITE wins!":"BLACK wins!";
        printBoard();
        System.out.println(tmp);
        System.exit(0);
    }
}
```

Player.java:

```
import java.util.Scanner;

public class Player {

int color;
public static int WHITE=1;
public static int BLACK=0;

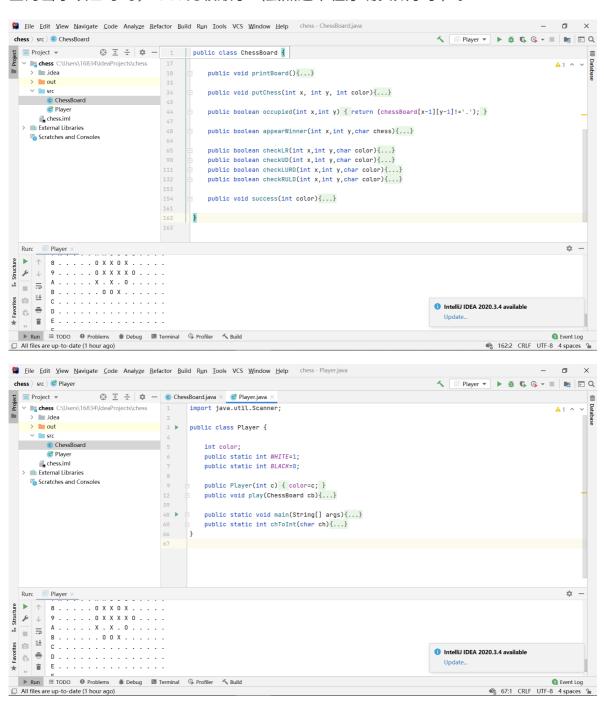

public Player(int c) {
    color=c;
}

public void play(ChessBoard cb) {
```

```
String tmp=(color=WHITE)?"P2's turn, you control
white.": "P1's turn, you control black.";
       System.out.println(tmp);
       System.out.println("Input the position you want to place
your chess, e.g. \"1 2\":");
       Scanner sc=new Scanner(System.in);
       String str=null;
       str=sc.nextLine();
       char x1 = str.charAt(0);
       char y1 = str.charAt(2);
       //从输入获取真实坐标
       int x=chToInt(x1);
       int y=chToInt(y1);
       //把输入限制在(1~F)之间,而且输入的坐标不可以是被占用的,如果不对就接
着输入。
       while((!((x1>'0'&&x1\leq'9'||x1\geq'A'&&x1\leq'F')&&
(y1>'0'&&y1\leq'9'||y1\geq'A'&&y1\leq'F')))
        ||cb.occupied(x,y)){
           System.out.println("please give right input!");
           str=sc.nextLine();
           x1 = str.charAt(0);
           y1 = str.charAt(2);
           x=chToInt(x1);
           y=chToInt(y1);
       }
       cb.putChess(x,y,color);
   }
   public static void main(String[] args){
       Player p1=new Player(BLACK);
       Player p2=new Player(WHITE);
       ChessBoard cb=new ChessBoard();
       cb.printBoard();
       //黑子先行,轮流下棋。
       //15*15的棋盘,最多下225个棋子,先下一个黑子,然后112回合
       p1.play(cb);
       cb.printBoard();
       for(int i=0;i<112;i++){
           p2.play(cb);
           cb.printBoard();
           p1.play(cb);
           cb.printBoard();
       }
       //112回合过后如果还没有胜利者,输出平局(否则会在中间就退出程序)
```

2 部分代码屏幕截图

因为当小项目写的,idea比较顺手(虽然这个程序确实太小了)。

3 结果展示

处理越界展示:

平局由于需要太多输入(棋盘是15*15的,需要225个输入),我没有精力,就没有写。
